EDUCATION

- **Manipal University Jaipur** Jaipur, India
Bachelor of Technology - Information Technology; GPA: 9.01 July 2019 - June 2023
Relevant Courses: Object Oriented Programming, Data Structures and Algorithms, Operating Systems, Computer Networks, DBMS

SKILLS

- **Languages:** Java, Dart, SQL, Typescript, Python
- **Technologies & Tools:** Spring Boot, REST APIs, Kafka, Redis, MongoDB, AWS DynamoDB, Firebase, Flutter, React, Azure (Container Apps, SQL DB), Docker, Terraform, GitHub Actions (CI/CD), Postman, SonarQube, Grafana

EXPERIENCE

- **Shell India Markets Pvt Ltd.** Bengaluru, Onsite
Associate Software Engineer (Full-time) August 2023 - Present
 - Contributed to **event-driven architecture using Confluent Kafka** by provisioning topics, schemas, ACLs, and consumer groups, enabling reliable asynchronous communication between microservices and external finance systems.
 - Optimized **CI/CD pipelines (GitHub Actions, Terraform)**, to automate **Docker deployments to Azure Container Apps** across **3 environments**, cutting release prep time by **2hrs** and reducing deployment failures by **10%**.
 - Established secure **authentication and authorization** using **OAuth2/OIDC and RBAC**, enabling enterprise SSO and enforcing fine-grained access control across **10+ application modules**.
 - Strategically proposed an **AI-assisted development pipeline** integrating Azure DevOps, Confluence, Figma, and GitHub, that auto-generated **100+** code snippets per sprint, **lessening manual effort** by an estimated **20%** and **shortening feature delivery** cycle from **10 days to 8 days**.
 - Orchestrated frontend-backend **API contracts (REST/WebSockets)** by defining JSON schemas and validating **request/response flows**, improving data consistency across **business-critical systems (SAP)**.
 - Engineered and maintained a **React SPA** for FRAME, a finance and risk platform supporting **50+** users across **Shell Energy Europe**, processing over **1M PnL** adjustments per month and reducing reconciliation time by **25%**.
- **Quiriverse** Bengaluru, Onsite
Founding App Engineer January 2023 - May 2023
 - Spearheaded development of a **cross-platform mobile application** from scratch using Flutter and **Clean Architecture**, establishing a robust foundation for scalable and maintainable feature growth.
 - Optimized data layer using **caching** and **Isar Database**, and introduced **Bloc** state management for predictable state handling, **reducing API calls** by **30%** and improving application performance.
 - Streamlined **real-time chat** functionality using **Server-Sent Events (SSE)** with robust error handling, increasing user engagement by **20%**.
- **Mindlab Corp.** San Jose, Remote
Software Engineering Intern May 2021 - July 2021
 - Integrated interactive **Rive animations** within the **Flutter-based mobile app**, utilizing **Firebase** for real-time data sync and **GetX** for state management, resulting in a **40%** boost in app performance.
 - Applied **clean code practices, null safety, and modular design**, contributing to a stable release with **500+** users.

PROJECTS

- **Crowdlens - Community-Sourced Product Intelligence:**
 - Built a **Spring Boot-based backend** system with **asynchronous job processing (Redis, Rqueue)** using **HTTP 202 & polling**, enabling scalable handling of long-running AI workflows with average completion times under **1 minute**.
 - Designed end-to-end **data pipelines** integrating **Reddit APIs (OAuth2 + scraper fallback)** with **LLM-based analysis (OpenAI via Spring AI)**, processing **100s** of posts per run to generate structured product insights.
 - Devised production-grade architecture with **AWS DynamoDB caching (TTL, query hashing)**, **SQLite persistence**, and **resilience patterns (rate limiting: Bucket4j, circuit breakers: Resilience4j)** for fault tolerance.
- **Kirana Register - Transaction Management Backend:**
 - Developed **secure backend APIs** with **JWT-based authentication and role-based authorization**, supporting low latency **transactional workflows** including purchase, refund, and product management.
 - Architected a **polyglot persistence** layer using **PostgreSQL (transaction ledger)**, **MongoDB (product and bill storage)**, and **Redis (caching currency conversion)**, enabling efficient handling of transactional workloads.
 - Implemented **async report generation** using **Kafka** to reduce report wait times; added **observability** using **Prometheus & Grafana** along with **structured logging** via **Logback** and **Logstash** for **monitoring** plus debugging.

ACHIEVEMENTS

- **Recognized twice at Shell** for delivering production-critical features and resolving high-impact issues, contributing to successful system rollout and operational stability.
- Solved **700+ problems on Leetcode** with consistency.
- **Microsoft Certified: Azure Fundamentals (AZ-900)**
- Best **Self Care Hack** at Major League Hacking (MLH) Mental Health Hacks II Hackathon.
